

What is Australia's population?

Please note: This task is designed to be completed using a computer and internet connection.

DATA:

Go to the Australian Bureau of Statistics website at www.abs.gov.au

TASK:

- Find the Population clock which is in the top right hand corner of the screen and use it to complete the table below.

Date:	Time:
Estimated Resident Population of Australia is:	
One new person is added to Australia's population every	

- Is Canberra time the same as Eastern Standard Time?
- Complete the following statements
 One birth every
 One death every
- Natural increase is the difference between the number of births and the number of deaths.

$$\text{Births} - \text{Deaths} = \text{Natural Increase}$$

Use the information in question 3 to determine if Australia is experiencing a natural increase or a natural decrease in population.....

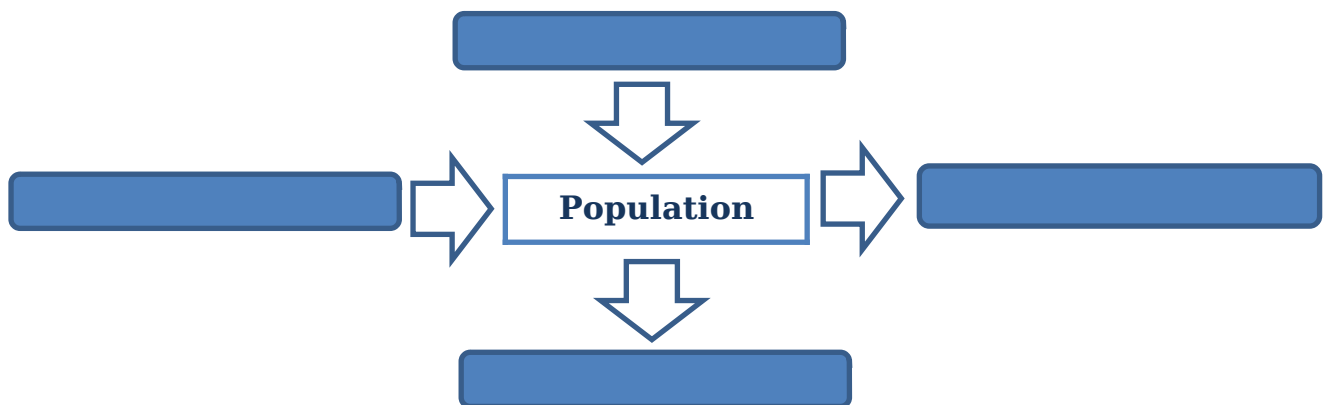

- Complete the following statements from the population clock:

Australia has a net gain of one international migration every
.....

Australia has an overall total population increase of
.....

6. The diagram below shows the inputs and outputs which make up the population of a place. Insert the words provided below in the appropriate boxes on the diagram.

Births Deaths Immigration Emigration

EXTENSION:

When this activity was designed the population of Australia was 22,623,298.

7. Calculate the difference between the number of people in Australia when you are viewing and when the activity was created.

8. Use this information to calculate an approximate date when the activity was created and show your working.
